Art Unit: 3641

1. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: appropriate headings required " the front end of belt... in Figures 9 and 10" should be Figures 8 and 10, "the winch... (Figure 8) should be Figure 9.

2. Claims 6 -11 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP 608.01(N).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 3641

5. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carpenture, Jr. et al in view of Canadian Patent #561919, Moser and Fusco, et al.

Carpenture, Jr. et al disclose a substantially similar unloading system.

Carpenture, Jr. et al lack a compensating system, a flexible belt with holes, and air injection. Canadian Patent #561919 discloses the use of a compensating system. Moser discloses the use of an air injection system (Figs. 6-8). Fusco et al disclose the use of a belt with holes. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide these features to the primary reference. The motivation is to aid and improve dispensing.

6. Lutz is cited to show similar structure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Bratlie whose telephone number is (703) 308-2669. The examiner can normally be reached on Mondays through Thursday from 6:30 to 5:00. Friday is the examiner's day off.

Any inquiry of a general nature or relating to the status of this application or proceeding should be to the receptionist whose telephone number is (703) 306-4177.
